

Cover profile pipe rail support

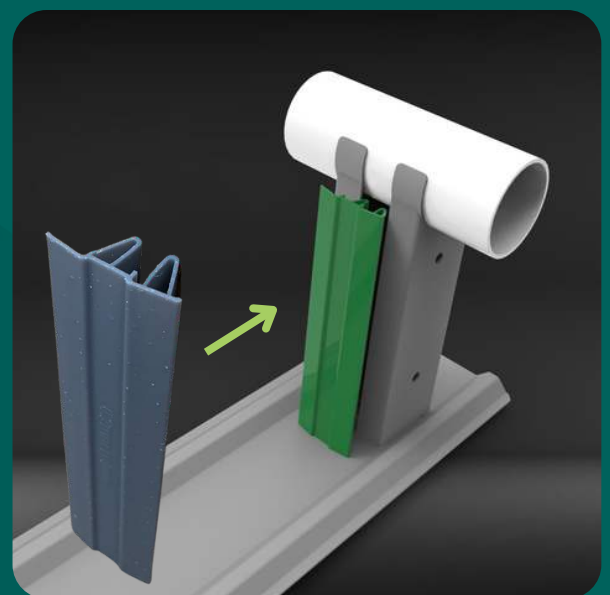

Optimization of greenhouse hygiene

The open structure of the pipe rail support allows dust, leaves, fruits and other material to accumulate and form a breeding ground for pathogens.

The new Metazet closing profile prevents this contamination.

What are the advantages of the cover profile pipe rail support?

- ✓ Increases hygiene in the greenhouse
- ✓ Prevents accumulation of dirt in the support
- ✓ UV-resistant and impact-resistant material
- ✓ Easy to install without tools
- ✓ No adjustments to the pipe rail system. The pipe can remain in the support, even during installation
- ✓ Made to measure for every support
