

# **Hanging Basket System**

*Maximise your nursery's potential with a second growing layer*

*Metazet's Hanging Basket System (HBS) is specifically designed to create an additional growing layer for plants or hanging plants above another crop, or at working height in the greenhouse or in processing areas. The system can be installed in almost any existing or newly constructed greenhouse, customized to the specific needs and requirements of your cultivation environment.*

The design is always tailored to the grower's preferences. The possibilities are endless: the system can be configured in various directions: up, down, left or right. Whether it's the minimum spacing between plants, the number of loops in the roof section, or the working height of the gutter section, Metazet designs the system to suit your needs. The Hanging Basket System can be constructed in any desired layout. With just one motor unit, which can operate up to 600 meters depending on the layout, significant cost savings can be achieved. To avoid obstacles, the HBS can be mounted directly to the trusses, or suspended below them.

### **Labour savings**

All tasks relating to the second growing layer, such as hanging and removing plants, are carried out at ground level in a central location. This streamlines operations and delivers substantial labour savings. Compared to working from a monorail platform, the HBS also enhances safety.

### **Irrigation**

The plants are watered using plant detection, with water delivered from above. The control system allows for manual watering, or the option to set a daily or weekly watering schedule. The system detects the precise position of the plants, preventing unnecessary water waste.

### **Optimal plant capacity**

The HBS accommodates any pot size, with hooks that can be positioned at any desired distance. The system can be configured for single or double layers, ensuring the optimal number of plants is always maintained in the system.

### **Installation**

Thanks to clear installation guides and technical drawings, the HBS is easy to install, either by the grower or a professional installer. In addition to installation advice, Metazet offers the option of having a supervisor provide technical support during the installation process.

### **Optimise growing with the Metazet Hanging Basket System**

The Hanging Basket System offers a highly efficient solution for adding a second growing layer to your operations. Contact us for tailored advice. Metazet's specialists are happy to discuss the benefits of this system for your nursery.

#### **Benefits of the Hanging Basket System:**

- ✓ Additional growing layer
- ✓ Suitable for all pot sizes
- ✓ Automatic irrigation
- ✓ Labour savings, resulting in lower labour costs
- ✓ Safe and ergonomic working conditions
- ✓ Available fully customised to specific requirements and specifications
- ✓ Easy to install independently
